Co-Founder and CTO/CPO
Leo CybSec , Leading cyber offensive projects,
UK

Mr. Jesus Castellanos

International IT security consultant,
Relational Tools S.L.

Dr. Ameer Al-Nemrat

Director of Cyber Security and Artificial
Intelligence Centre – UEL, UK

Introduction

Nowadays, more and more institutions suffer financial damage because hackers from various origins abuse vulnerabilities in a process, system, network, application or infrastructure. These are Nation state actors, hackers commissioned by companies to steal Intellectual property, Hackers who use an environment as a test object, crackers who do damage to get ransom or just script kiddies who find something. But even hackers who get hacked again can pose a risk.

In light of rapid digital transformation and the growing reliance on digital technologies, cybersecurity governance has become a fundamental pillar for ensuring business continuity, protecting digital assets, and enhancing institutional trust, his workshop aims to highlight global best practices in cybersecurity governance and to link technical aspects with regulatory and legislative frameworks, ensuring effective management of cyber risks at the organizational level.

- Concept and importance of cybersecurity governance
- Roles and responsibilities of boards of directors and executive management
- Cyber risk management and decision-making frameworks
- Policies, standards, and regulatory compliance
- The British model of cybersecurity governance
- Incident management and crisis response
- Measuring cybersecurity performance and maturity
- Future trends in cybersecurity governance
- Upskilling and reskilling employees to match future job requirements
- Creating a continuous learning culture in institutions.
