Introduction

In an era characterized by rapid technological advancements, global uncertainties, and increasing operational risks, organizations must strengthen their resilience and preparedness to effectively respond to crises and ensure business continuity, this seminar aims to bring together experts, decision-makers, researchers, and practitioners to discuss the latest strategies, frameworks, and technologies that enhance organizational resilience.

The conference will explore the integration of Crisis Management and Business Continuity Management (BCM) with emerging Artificial Intelligence (AI) technologies. Participants will gain insights into how AI can support risk assessment, predictive analytics, emergency response, decision-making, operational continuity, and recovery planning. Through keynote presentations, panel discussions & case studies, the conference will highlight best practices and innovative approaches for building agile, resilient, and future-ready organizations.

Forum Topics:

- Business Continuity Management (BCM).
- Crisis Management and Organizational Resilience.
- Artificial Intelligence Developing and sustaining work during crises.
- AI for Business Continuity & Operational Resilience & Risk Management & Quality and IT.
- Data Analytics and Decision Support Systems.
- Emerging Technologies and Future Challenges.
- Capacity Building and Human Capital Development, Enhancing employees creative and innovative

Target Audience:

Given the diverse nature of the conference topics, which encompass various aspects of Business Continuity, Crisis Management, and AI, the conference is intended for employees across all organizational and functional levels within oil and gas organizations.
